Software Engineering Consultant, “Cervitech” Mobile Application, University of Lagos, Akoka, Nigeria.

This project involves the building of a mobile application that monitors the neck angle of a user relative to the position of the phone while in use. This application makes use of the phone accelerometer and gyroscope to calculate the tilt angle of the phone. It also sends regular push notifications to the users on how they have improved over time with the use of the application. The user can also set daily average neck angle goal. The mobile app can be downloaded via this link: <https://www.cervitech.com.ng/>

Supervised and managed other software developers and also worked as the lead backend developer.
